

AARADHYA PC-200

A highly effective liquid super plasticizer specially designed for medium strength to high strength concrete (M15 to M25) using river sand or crushed sand. It provides very good pumpability from free flowing concrete suitable for hot weather conditions. It is modified PC based admixture, specially designed to substantially decreasing the temperature for concreting purposes

Salient Features:-

Aaradhya PC-200 offers good dispersion in concrete mixes which enables the mix to be pumpable even after 120 mins from the time of mixing.

- High range water reduction up to 25%.
- High retention time up to 120 mins.
- High PC content with approximately 20% PC molecules.
- High adsorption on cement particles.
- Significant increase in ultimate strength.
- Increases bond strength of concrete to reinforcing steel.
- Normal set without retardation, even when overdosed.
- Improves density and surface finish.
- Chloride free - does not attack reinforcement or pre- stress cables.

Type	Polycarboxylate Ether
Color	Orange Yellow
Specific Gravity	1.13
pH	6-6.5
Shelf Life	12 Month
Packaging	50 kg/120 kg/230 kg
